^a The criterion for visual impairment was visual acuity less than 20/40 but better than 20/200 based on the visual acuity in the best-corrected, better-seeing eye. The criterion for blindness was visual acuity of 20/200 or less based on visual acuity in the best-corrected, better-seeing eye.

Projected Number of Persons With Visual Impairment and Blindness in the United States, Stratified by Age Group, From 2015 to 2050 (in Millions)^a

Ocular trauma

Preventing diabetic eye disease starts with preventing diabetes

Family background

High blood pressure

DIABETES

Gestational diabetes

Obesity, high cholesterol, and high triglycerides

PROTECT YOUR VISION FROM DIABETES

Have a dilated eye exam every year, and follow these steps to keep your health on **TRACK**.

T	R	A	C	K
				
Take your medications as prescribed by your doctor.	Reach and maintain a healthy weight.	Add more physical activity to your daily routine.	Control your ABC's—A1C, blood pressure, and cholesterol levels.	Kick the smoking habit.

Age-related macular degeneration (AMD) is the most common cause of blindness in Americans aged 65+

Age-Related Macular Degeneration: NEI Looks Ahead

Between 2010 and 2050, the estimated number of people with AMD will more than double from 2.1 million to 5.4 million.

For more information on eye disease, visit nei.nih.gov/health.

Each eye represents a total of 80 million people, the estimated number of Americans who will be 65 and older in 2050, the population most affected by common eye diseases.

Besides aging,
smoking is the biggest
risk factor for developing

AMD.

NEI

Preventing vision loss

Evidence-based strategies for preventing eye disease include:

- Wearing safety glasses

- Avoiding smoking

- Keeping a healthy diet

.....but many eye diseases are not symptomatic in the early stages and regular comprehensive eye exams with a skilled provider are crucial to early detection and treatment.
